SUPERBRAID™

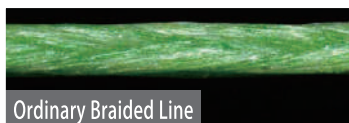

Super Strong PE Braid Line!

Micro pitch, specially coated braided line.
Smooth surface design reduces friction and line noise,
allowing you to fish with stealth and silence.

H.I.P. Heat Integration Process

Tightly braided micro pitch braid processing, and fibers are adhered firmly each other by performing a special heat treatment.

Rounder, Smoother, More Abrasion Resistance.

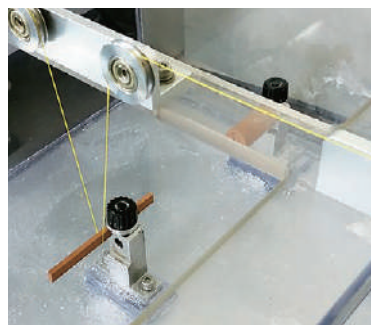

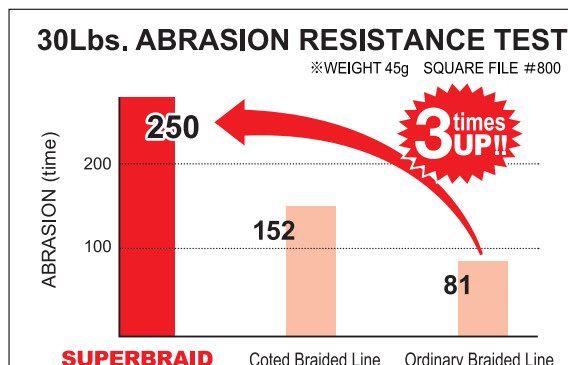

IZANAS™

Ultra High strength polyethylene fiber

All YO-ZURI braided line is made with Ultra High Strength Polyethylene Fiber IZANAS™ manufactured by Toyobo Japan.

Point 1 Abrasion Resistance is twice that of conventional braided line. Color fading is drastically reduced.

Point 2

Rounder and Smoother compared to conventional braided line.
Resistance of casting is reduced and casting distance improved because fibers are braided rounder and tighter.
Significant reduction of rod guide friction noise.

Point 3

Less line-trouble when casting.
When used in jigging, water is drained better and line can be dropped smoothly minimizing resistance caused by line slack.

Point 4

Significantly Increased Sensitivity and Easy Handling!

HYBRID™

Finally a line that makes a difference!

Our goal of developing a new revolutionary fishing line was lofty – make a line that was stronger, more abrasion resistant, more sensitive and more durable than any nylon lines on the market.

Hybrid is the first and only fishing line that molecularly bonds nylon and fluorocarbon during extrusion. The result is a strong, dense new material that we call Hybrid. Hybrid takes advantage of the awesome abrasion resistance and sensitivity of fluorocarbon, while utilizing the flexibility and stretch of nylon

3D INSHORE® SERIES

3D PRISM FINISH

INTERNATIONAL PATENT
U.S.Pat.No.8,931,205

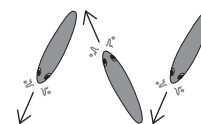

The internationally patented 3D Internal Prism sends out flashes of reflected light which fish can see from a great distance.
3D Prism Finish imitates the scaled finish of a baitfish.
The 3D Prism Finish entices strikes when lures with foil finishes do not.
